Executive summary

Demonstration. Synthetic company, banks and transactions generated for illustration.

This document proves each bank account of Demo Client at 2026-09-30, from the balance in the books to the balance per the bank, line by line. It is prepared for the preparer and the reviewer of each reconciliation, and for the auditor's file. An account should not be signed while it shows an unexplained difference.

Methodology

Each statement starts from the books, adds what lies between them and the bank, and compares the result with the balance the bank reports; what remains is shown on the last line and should be zero. Balances are in the currency of the account. Items that cleared after the period end are shown as timing.

Limitations and assumptions

- The bank balance is the one in the bank's file; an independent confirmation from the bank is outside this document.
- An item that clears after the last bank date received remains on this statement.
- The classification of an item is a reading of the data; the preparer confirms it against the source document.
